

World's first lock screen that lets you unlock your phone using more than one pass code and then accordingly locks the apps that you want locked for that profile.

---

## AULO

An app that allows you to set which apps are to be blocked and for whom.

This is not just an app that locks your screen. With its unique profiling system, we have taken it to the next level.

It's a mobile locking and security facilitator.

---

## SIMPLICITY

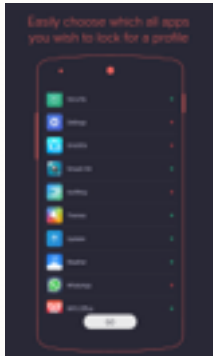

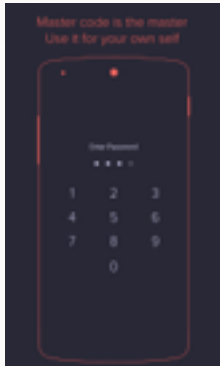

---

Intuitive user controls with a slick GUI

Manage all your profiles from a single touch.

Every code is associated to a certain profile and every profile can be configured by the user to lock the apps which they want to lock. And then there is a master code which unlocks everything so the owner of the phone does not have to enter a code every time they use an app.

So a person using AuLo when at home won't have to enter the passcode every time he has to check his WhatsApp, as he is the master. As for when his friends are using the phone at work or in college, all he has to do, is tell them another passcode in which he has locked WhatsApp so that they can't access it.

# FLOW

With master code you use the device for yourself and with different profiles you can easily let others use your device without worrying about them using the apps that you do not want them to.
